brinqa | QUALYS® CONTINUOUS SECURITY

SOLUTION BRIEF

Vulnerability Risk Management with Brinqa and Qualys

The integrated solution combines correlation of vulnerabilities, threat intelligence and business context with risk analysis and scoring to prioritize remediation efforts and measure program effectiveness.

HIGHLIGHTS

- **Complete asset view via integration with Qualys, CMDB, HR systems and in-house data sources**
- **Integrated threat intelligence feeds for vulnerability risk analysis and prioritization**
- **Advanced ticket creation and vulnerability consolidation rules**
- **Out-of-the-box ServiceNow, RemedyForce and JIRA integrations**
- **Self-service reports and dashboards**

Solution Overview

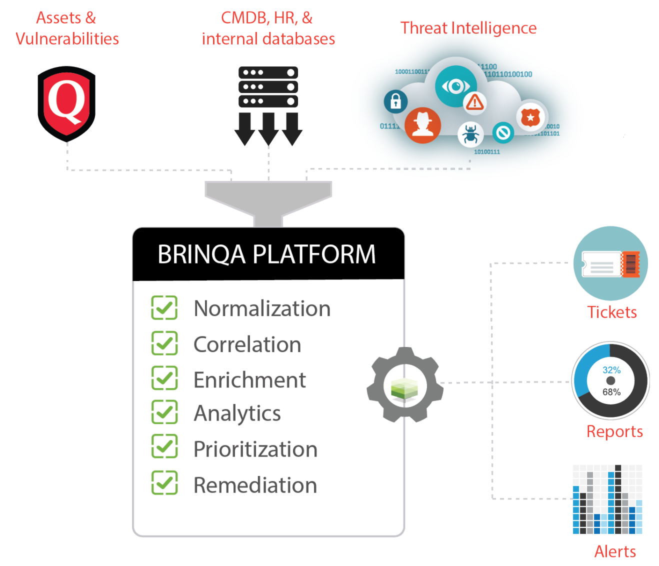
Brinqa's flagship Risk Platform integrates with Qualys Vulnerability Management (VM) to deliver the most comprehensive way to analyze, prioritize and remediate vulnerabilities. Vulnerability results from one or more scanners are collected and enriched with information from other security systems within the enterprise. The consolidated vulnerability information is analyzed against contextual and business-centric asset relationships to evaluate the true impact of scan detections. Real-time threat intelligence from external feeds and internal data sources are combined with vulnerability information to prioritize remediation and measure as well as communicate overall effectiveness of the program.

Brinqa Vulnerability Risk Management utilizes the full power of the Brinqa Risk Platform to deliver lightening fast, near-real time analysis of vulnerability data. Integrated asset management capabilities clearly represent the organizational and reporting structure to evaluate the impact of identified vulnerabilities to business assets and individuals. The application prevents information overload at every step of the analysis process. By eliminating redundancies, prioritizing automatically and consolidating remediation tasks, it provides organizations with the most beneficial action plan. Integrated workflows provide a highly simplified path to vulnerability remediation. Actionable, task-centric dashboards and reports ensure that there is a constant emphasis on undertaking actions with the greatest positive impact on the organization's security posture.

How It Works

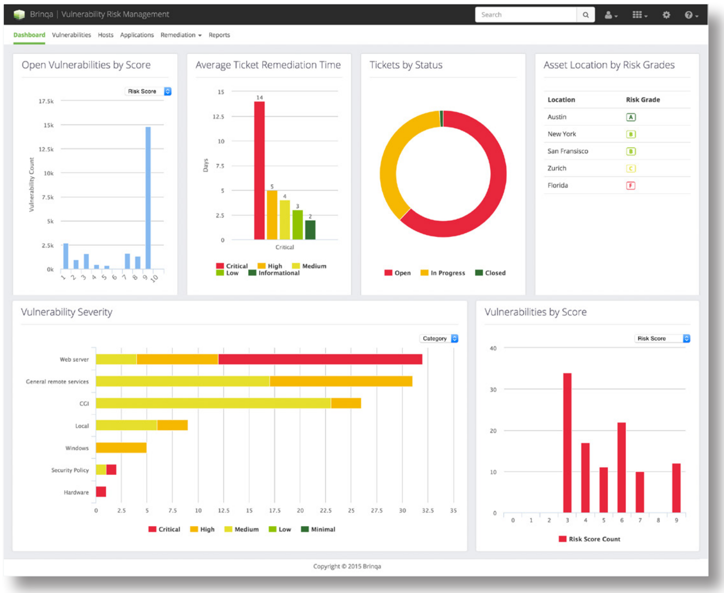
The integrated solution comes with ready-to-use risk models, asset metadata, ticket generation rules and report templates. The turn-key solution automatically collects scan results for advanced consolidation, correlation and risk-based prioritization of vulnerabilities to deliver immediate insights to security and operations teams.

The risk-scoring model augments vulnerability classification and characteristics with additional sources such as internal and external exploit data and real-world threat intelligence. Vulnerabilities may be consolidated based on type and asset ownership rules to provide near real-time visibility, through pre-configured dashboards and reports, to reveal the most critical and imminent threats to the business. Built-in integrated workflows provide a simple, guided path to efficient closed-loop remediation.



Identify and establish business context

Security teams that function in isolation from the business they support run the risk of spending valuable time, money and human resource in addressing seemingly critical problems that may have minimal impact to business. The integrated solution puts an emphasis on representing goals, mandates and composition of the business being evaluated and factoring in this information during risk analysis. This encourages identification and resolution of threats that have the most significant impact to business.



Location	Risk Grade
Austin	A
New York	B
San Fransisco	B
Zurich	C
Florida	F

Correlate, analyze and prioritize vulnerabilities

The vulnerability and threat landscape is constantly changing with new breaches and counter-measures introduced every day. The integrated solution automatically incorporates numerous sources such as exploit databases and external threat intelligence feeds, on a continuous basis, to evaluate the security posture of the organization in light of the most recent breach developments. These criteria are factored into the Brinqa vulnerability risk-rating model.

Encourage effective remediation

A critical goal of efficient vulnerability management is to facilitate the remediation of prioritized threats. Advanced vulnerability consolidation, built-in Brinqa workflows and integration with common IT service management systems provides an easy path from vulnerability identification and prioritization to remediation.

Communicate, collaborate and transform

Visual graphs provide a unique perspective for understanding the security data and deriving insights through advanced analytical processes like graph-clustering and node-classification. The integrated solution provides a comprehensive reports catalog targeted for a wide audience range from system administrators to security teams and C-level executives to ensure that stakeholders at every layer of the organization are effectively informed and actively engaged in the decision-making process.

About Qualys

Qualys, Inc. (NASDAQ: QLYS) is a pioneer and leading provider of cloud security and compliance solutions with over 7,700 customers in more than 100 countries, including a majority of each of the Forbes Global 100 and Fortune 100. The Qualys Cloud Platform and integrated suite of solutions help organizations simplify security operations and lower the cost of compliance by delivering critical security intelligence on demand and automating the full spectrum of auditing, compliance and protection for IT systems and web applications. Founded in 1999, Qualys has established strategic partnerships with leading managed service providers and consulting organizations including Accenture, BT, Cognizant Technology Solutions, Dell SecureWorks, Fujitsu, HCL Comnet, Infosys, NTT, Optiv, Tata Communications, Verizon and Wipro. The company is also a founding member of the Cloud Security Alliance (CSA). For more information, please visit www.qualys.com.

About Brinqa

Brinqa is a leading provider of unified risk management – enabling stakeholders, governance organizations, and infrastructure and security teams to effectively manage technology risk at the speed of business. Brinqa software and cloud services leverage an organization's existing investment in systems, security, and governance programs to identify, measure, manage and monitor risk. With Brinqa, organizations are reducing response time to emerging threats, impact to business, and technology risk and compliance costs by over 50% through real-time risk analytics, automated risk assessments, prioritized remediation, actionable insights and improved communication.

Founded in 2008 by industry leaders in risk management with a proven track record in delivering cutting edge, innovative and cost-effective solutions. Brinqa's award winning software and cloud services are trusted by fortune 500 companies across risk disciplines such as information technology risk, vendor risk, and regulatory compliance risk. Brinqa is headquartered in Austin, Texas and has a global presence.
