

## Vulnerability Risk Management with Brinqa and Rapid7

The integrated solution combines correlation of vulnerabilities, threat intelligence and business context with risk analysis and scoring to prioritize remediation efforts and measure program effectiveness.

### HIGHLIGHTS

- Complete asset view via integration with Rapid7, CMDB, HR systems and in-house data sources
- Integrated threat intelligence feeds for vulnerability risk analysis and prioritization
- Advanced ticket creation and vulnerability consolidation rules
- Out-of-the-box ServiceNow, RemedyForce and JIRA integrations
- Self-service metrics, reports and dashboards

### Solution Overview

Brinqa and Rapid7 are now integrated to deliver the most comprehensive answer to the imminent and urgent problem of Vulnerability Risk. Brinqa Vulnerability and Threat Risk Management solution utilizes a powerful risk model, incorporating business risk and threat intelligence, to present a unique perspective to vulnerability prioritization. It puts an emphasis on automation and intelligence to streamline the critical functions of prioritization, remediation and reporting. Rapid7 Nexpose is an internationally-awarded assessment solution for your physical, virtual, cloud and mobile environments. Its Adaptive Security integrates with your existing infrastructure to instantly identify and assess vulnerabilities as your attack surface changes. Together, these products deliver you the most dynamic and complete solution for evaluating and managing Vulnerability Risk in your organization.

Vulnerability results from one or more scanners are collected and collated with information from other security systems present in the ecosystem and the consolidated vulnerability information is analyzed against contextual and business-centric asset relationships to evaluate the real world impact of scan detections. Real-time threat intelligence from external feeds and internal data sources are combined with exploit information to measure and communicate the temporal impact of vulnerabilities and to identify the most imminent threats.

### How It Works

The integrated solution comes with ready-to-use risk models, asset metadata, ticket generation rules and report templates. The turn-key solution automatically collects scan results for advanced consolidation, correlation and risk-based prioritization of vulnerabilities to deliver immediate insights to security and operations teams.

The risk-scoring model augments vulnerability classification and characteristics with additional sources such as internal and external exploit data and real-world threat intelligence. Vulnerabilities may be consolidated based on type and asset ownership rules to provide near real-time visibility, through pre-configured dashboards and reports, to reveal the most critical and imminent threats to the business. Built-in integrated workflows provide a simple, guided path to efficient closed-loop remediation.

## Establish unparalleled business and risk context

Security teams that function in isolation from the business they support run the risk of spending valuable time, money and human resource in addressing seemingly critical problems that may have minimal impact to business. Combine Rapid7 RealContext™ with Brinqa asset management and risk assessment capabilities to create a true representation of business and risk context. Automatically leverage this context to encourage identification and resolution of threats that have the most significant impact to business.

## Prioritize threats in real-time

The attacker landscape is constantly changing with new malwares, toolkits and threat actors identified every day. Augment Rapid7 RealRisk™ with additional sources like external threat intelligence feeds and exploit databases to continuously evaluate the real-time vulnerability posture of the organization. Identify the most imminent and impactful vulnerabilities and prioritize remediation efforts to address these emerging threats automatically.

## Deliver a clear path to remediation

To improve risk posture, we must improve return on remediation efforts, reduce mean time to remediation and provide targeted, concise and actionable remediation plans. Combining Nexpose remediation plan recommendations with Brinqa rule-based ticketing engine to manage remediation efforts with built-in Brinqa workflows or through integrations with common IT service management systems (like ServiceNow, Remedy, Jira, etc.), the integrated solution delivers a clear path from vulnerability assessment to remediation.

## Communicate, collaborate and transform

Performance and risk metrics can be valuable tools for building consensus and confidence around your information security initiatives. Leverage the extensive libraries of advanced metrics and reports from Brinqa and Rapid7 to address a wide audience range — from network administrators to security teams and C-level executives — and ensure that stakeholders at every level of the organization are effectively informed and actively engaged in the decision-making process.

## About Rapid7

Rapid7 is engineering better security with simple, innovative solutions for IT security's most critical challenges. Our security data and analytics solutions collect, contextualize, correlate, and analyze the security data you need to dramatically reduce threat exposure and detect compromise in real-time. Unlike traditional vulnerability assessment or incident management, Rapid7's comprehensive data collection, attacker intelligence and user-behavior analytics give you immediate insight into the security state of your assets and users from the endpoint to the cloud. Rapid7 security experts can help you advance your security program, whether you need emergency breach response or to transform your security processes and better align investments to your organization's risk and needs. Rapid7 is trusted by more than 5,100 organizations across 99 countries, including 37% of the Fortune 1000.

## About Brinqa

Brinqa is a leading provider of unified risk management – enabling stakeholders, governance organizations, and infrastructure and security teams to effectively manage technology risk at the speed of business. Brinqa software and cloud services leverage an organization's existing investment in systems, security, and governance programs to identify, measure, manage and monitor risk. With Brinqa, organizations are reducing response time to emerging threats, impact to business, and technology risk and compliance costs by over 50% through real-time risk analytics, automated risk assessments, prioritized remediation, actionable insights and improved communication.

Founded in 2008 by industry leaders in risk management with a proven track record in delivering cutting edge, innovative and cost-effective solutions. Brinqa's award winning software and cloud services are trusted by fortune 500 companies across risk disciplines such as information technology risk, vendor risk, and regulatory compliance risk. Brinqa is headquartered in Austin, Texas and has a global presence.
